VN HYDROPNEUMATICS

Engineered motion.
Built around your application.

Company Profile | Hydraulic & Pneumatic Engineering

INDUSTRIAL FLUID POWER & MOTION SOLUTIONS

Hydraulic cylinders · Pneumatic cylinders · Telescopic cylinders
Hydraulic power packs · Hydraulic presses · Scissor lifts · Sealing solutions

Who We Are

VN Hydropneumatics is an industrial engineering and manufacturing business based in Dombivli, Maharashtra, India. We focus on hydraulic and pneumatic cylinders, hydraulic power systems and purpose-built industrial equipment. Our work is guided by the application: understanding the machine, load, movement, operating environment and interface before aligning the product configuration.

Our Approach

We work with OEMs, machine builders, maintenance teams and industrial buyers to discuss new equipment requirements, replacement components and custom-built solutions. Customers can share a drawing, sample, dimensional schedule or operating parameters as the starting point for a technical discussion.

Product Portfolio

Product	Overview
Hydraulic cylinders	Custom cylinder configurations based on bore, stroke, pressure, mounting, load and duty requirements.
Pneumatic cylinders	Pneumatic actuators specified around bore, stroke, action, mounting and operating pressure.
Telescopic hydraulic cylinders	Multi-stage cylinder arrangements for long extension with compact retracted length.
Hydraulic power packs	Power units configured around pump flow, pressure, motor, reservoir, valves, filtration and controls.
Hydraulic presses	Press systems developed around tonnage, daylight, stroke, frame, tooling and process needs.

Product	Overview
Scissor lifts	Lifting platforms configured around rated load, platform dimensions, travel, installation and safety requirements.
Hydraulic & pneumatic seals	Sealing components selected for dimensions, pressure, speed, temperature and media compatibility.

Engineering & Manufacturing Focus

A practical, specification-led process

Application review

We begin with the intended use, load, required movement, operating cycle, installation envelope and environmental conditions. Where available, a customer drawing, sample or machine layout helps clarify the requirement.

Specification alignment

The product discussion may cover bore and rod dimensions, stroke, pressure, mounting arrangement, port location, material, sealing, speed, control arrangement and applicable safety provisions. Final specifications are confirmed with the customer before manufacture.

Manufacturing and inspection

Manufacturing operations and inspection points are planned according to the approved product specification. Inspection criteria, test requirements and documentation can be discussed and agreed as part of the order.

Industries & Applications

Our product categories are relevant to industrial machinery, automation and process equipment, material handling, lifting systems, presses and forming equipment, mobile equipment, maintenance and special-purpose machines. Suitability is confirmed against each application's technical and operating requirements.

Why Work With VN Hydropneumatics

Application-led discussions	Product selection starts with the machine and its operating requirements.
Broad fluid-power range	Cylinders, power units, presses, lifting equipment and seals under one product portfolio.
Custom requirement support	Drawings, samples and technical parameters can be used to define the requirement.
India and export enquiries	Based in Maharashtra, India, and open to enquiries from domestic and overseas buyers.

Start a Technical Discussion

Share the details that help us understand your requirement.

For a new cylinder, replacement unit, power pack or custom machine, please share as many of the following details as are available:

- Product type and intended application
- Bore, rod diameter, stroke and mounting arrangement (for cylinders)
- Working pressure, required force or rated load
- Operating speed, duty cycle and environment
- Available installation space and connection details
- Drawing, sample photographs or existing equipment details
- Quantity, delivery location and required timeline
